Subject: ENERGY STAR Lamps 2.0 First Draft Comments

Dear

About the ENERGY STAR Lamps 2.0 First Draft :

We think maybe the new light efficiency is very high and 80% of our certified products which with a very high CRI can't satisfy this requirement .

In general ,we believed that a product which with the higher CRI maybe have the lower light efficiency.

So we suggest, the light efficiency can be adjusted according to the CRI.

Sincerely~
