Subject: Energy Star Labeling for Lighting
Date: Thursday, December 1, 2022 3:17:53 PM

Hello,

I understand the proposed change to Energy Star labeling for lighting products. I think it is great that most of the lighting products meet the energy saving goals of the Energy Star program. The energy star label on lighting fixtures and bulbs provides a level of comfort that we are getting efficient products. My fear is that ending the program for light bulbs, fixtures and similar products will allow less efficient products to creep back into the supply chain. We'll always have to worry about counterfeit products. I know the first thing we look for when purchasing products is the energy star label.
