Subject: 10,000 Lifetime Requirement

Alex,

Hope that you and your family had a happy holiday.

I wanted to quickly follow up with our discussion last week relating to the 10,000 lifetime requirement. I have discussed further with the team internally and we advocate the adoption of a minimum lifetime requirement of 10,000 hours so long as it is done in a manner that continues to drive and promote high quality products. We believe that the implementation of the 10,000 hour requirement will reduce the initial product cost allowing for a more rapid market adoption of LED technology.

Hopefully this helps.

Regards,
-th
