

To home it may concern:

As a seasoned lighting designer, that does a significant volume of “High End” retail lighting design and also an energy code writer (I drafted much of the CA Title 24-13 Tailored Compliance code language on behalf of the CA PUC and the CEC), I am strongly in favor of pushing the envelope toward higher quality LED lighting. Sara’s focus on “High CRI” LED’s is aimed at archiving this goal. For LED lighting to be fully embraced by “High End” retailers and “Up-Scale” hospitality superior lighting quality, including excellent CRI, is a must! Therefore I urge the EPA to include the high CRI component, as proposed by SORAA, into the next generation Energy Star standard.

Thank you in advance for including their high CRI component in the next Energy Star Standard.
