

Comments about Energy Star6.0 draft2

Issue No.	Topic	Comment
1	Description	<p>Row 116~117: If the UUT is equipped with multiple networking functions, only one connection. If the UUT is equipped with multiple network functions, only one connection shall be made in the following order of</p> <p>Comment: Need to delete the sentence we marked by Red. It should be a mistake in description.</p>
2	Light Measuring Distance	<p>Row 227: Following the LMD's manufacturer's instructions, it is recommended that the LMD either be used as close to the screen as possible, not exceeding 500mm, or measure an area of at least 500 pixels.</p> <p>Comment: Delete the requirement of test distance. Just specified the measured area is enough.</p>
3	Test Data Record	<p>Row 97: Power measurements shall be recorded in watts and rounded to the nearest tenth of a watt.</p> <p>Comment: Propose to use upto 2 decimal points</p>
4	Luminance Requirement	<p>To use typical luminance of panel as a basis of calculation for luminance instead of using max. Reason being there is currently no consistent specs from panel suppliers on max luminance and varies from supplier to supplier for the same product. Typical luminance measurement is typically about 80% of the panel max. Thus, Default values of the product is measured with at least 65% of the typical luminance of monitor</p>
